

## Did You Ever Wonder? - January 27, 2025

How exactly do our new escalators that have been staged outside of Concourse D make it into the building in order to be installed in the new airport core? Ingenuity of course!

Workers cut a piece of the wall out of the end of Concourse D and used a small crane to lift the escalator pieces into the Concourse where they will be kept in a holding area then brought to the core (don't worry, we will capture that feat as well), for installment in the next couple of weeks.

Our new core area is taking shape with steel already installed for the elevators, ceiling work underway and soon placement of escalators.
